

Technology Based Problem and Solution

Problem

The problem is lack of education and knowledge based on programming in Bangladesh. Most of the people are ignorant to programming based knowledge and information. So, it is one of the most pressing and persistent technology based problems in Bangladesh.

Solution

This problem can be solved by implementing multiple plans such as:

- Many people in Bangladesh don't know the effectiveness of programming languages. We can unify the various programming languages with their applications existing in software development.
- We can introduce programming languages from the very beginning in our education system. Programming languages can be introduced as a basic subject like literature, grammar and mathematics.
- Programming competition can be introduced to the students from the junior level like Olympiads. Then their interest in programming will increase.
- We must create a level playing field where every student will get the proper opportunity for programming. Discrimination must be removed to provide the equal opportunity for the students from underdeveloped areas.
- We must provide qualified teachers to teach students the programming languages.
- We must build enough institutes in our country to make some skilled programmers for web development, android development etc.

By implementing these plans successfully, the problem can be solved mostly.
